The default **First Article** report that comes with QC-CALC does not display the Characteristic Source value. This White Paper will give step by step instructions for adding a column to the default First Article template to display the Characteristic Source.

The Report Designer

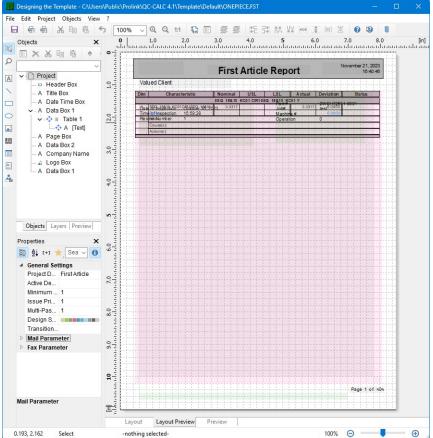

The directions shown here will walk you through adding a column for Characteristic Source in the report and shrinking the remaining columns to make enough room on the page for an additional column. This is a lengthy process, but relatively simple to accomplish.

1. From QC-CALC Real-Time choose the **Report – Design Template** menu.

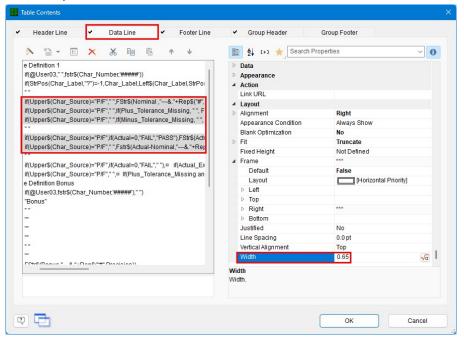

2. Choose the OnePiece.FST template from the list of files that appears and click **Open**.

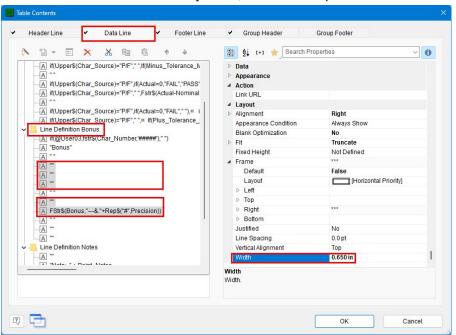

Making more Space

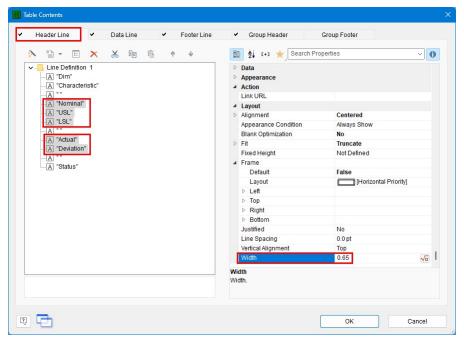

- 1. Double click on the table (the large pink rectangle) and the **Table Contents** window will appear.
- Choose the **Data Line** tab then use the CTRL key to click and highlight the lines for the specification values and the Actual and Deviation values in the **Line Definition 1** area and set the **Width** under **Layout** for all 5 lines to "0.65." Be sure to skip the blank line in the middle.

3. Scroll down into the **Line Definition Bonus** area. Use the CTRL key to highlight the matching lines from the previous step and set the **Width** under **Layout** for all 5 lines to "0.65." These are mostly blank, so match the pattern below.

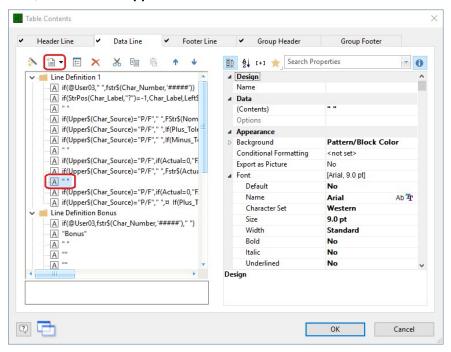

- 4. Now that we have made room in the Data area for the additional column, we need to do the same thing in the Header area.
- 5. Choose the **Header Line** tab then hold the CTRL key and click to highlight the specification titles and the Actual and Deviation lines in the **Line Definition 1** area and set the **Width** under **Layout** for all 5 lines to "0.65." Be sure to skip the blank line in the middle.

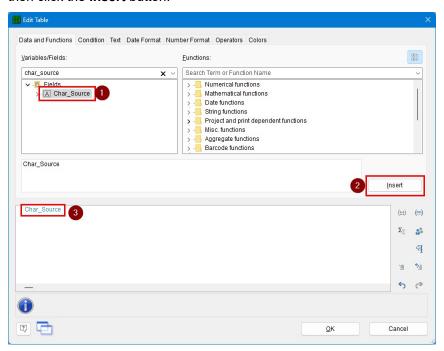

6. Click the **OK** button then choose **File - Save**, to save these changes.

Adding a Column

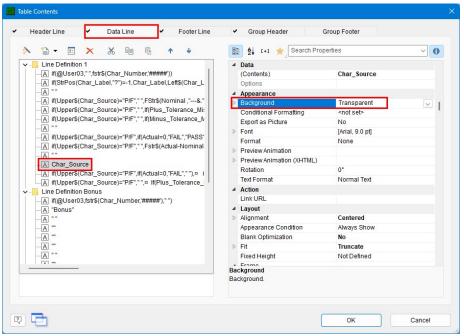

- 1. Double click on the table and the **Table Contents** window will appear again.
- Choose the Data Line tab, highlight the 3rd to last line in the Line Definition 1 area, then click the Append column button.

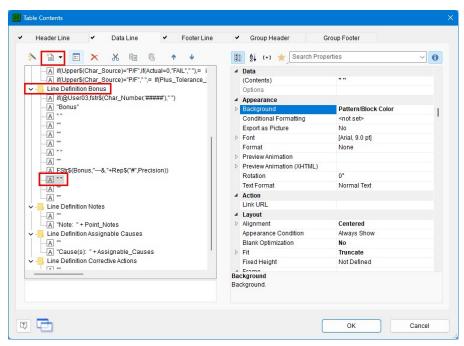

3. In the **Edit Table** window that appears, choose "Char_Source" in the **Fields** list, then click the **Insert** button.

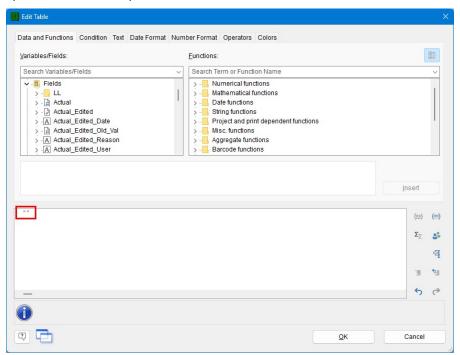

4. Click **OK** on the **Edit Table** window, then, with the "Char_Source" line highlighted on the left, change the **Width** to "0.650" and the **Background** to "Transparent."

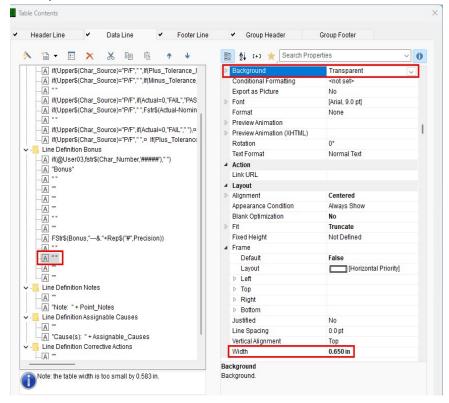

Next, the same changes need to be made to the Bonus line. Highlight the 3rd to last line in the **Line Definition Bonus** area and click the **Append column** button.

5. In the **Edit Table** window that appears, enter " " (two quotation marks with a space between them) in the box at the bottom.

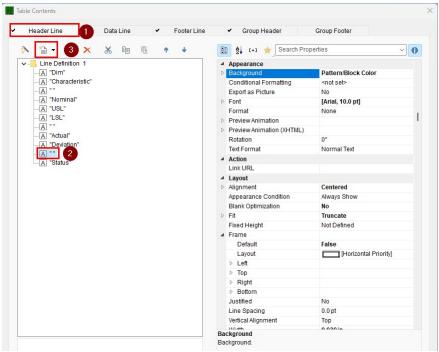

6. Click **OK** on the **Edit Table** window, then in the **Table Contents** window highlight the "" line on the left, navigate to **Layout** on the right and change the **Width** to "0.650", then scroll to **Appearance** and change the **Background** to "Transparent."

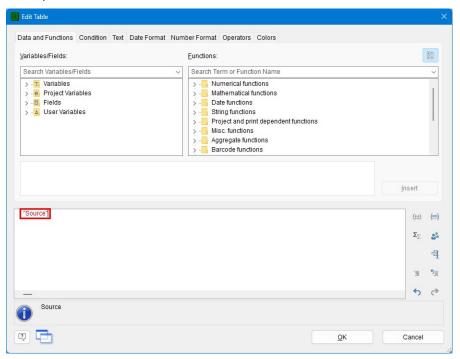

New Column Header

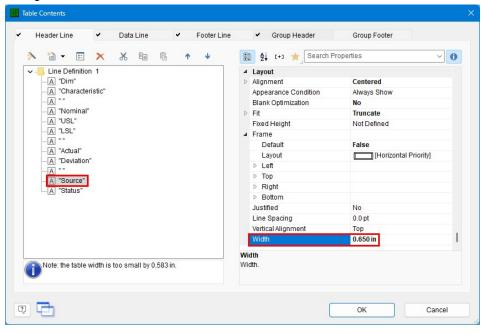

- In the Table Contents window choose the Header Line tab.
- 2. Highlight the " " line after "Deviation", then click the **Append column** button.

3. In the **Edit Table** window that appears, enter "Source" (including quotation marks) in the bottom box and click **OK**.

 Back in the Table Contents window, highlight the "Source" line on the left and change the Width to "0.650".

Final Steps

- 1. Click **OK** on the **Table Contents** screen and save your changes (**File Save**).
- 2. Exit from the Report Designer and run your report.
- You should see the contents of the Characteristic Source field appearing in your report now.
